DETAILED ACTION

1. This communication is in response to amendment filed on October 15, 2009.

Response to Amendment

2. Claims 1-2, 23-24, and 29-30 have been amended. Claims 7-20 and 22 have been canceled. Claims 29-34 are now canceled below.
3. Claims 1-6, 21, and 23-28 are pending and have been allowed.

EXAMINER'S AMENDMENT

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jacob LaCombe (Reg. No. 63036) on February 16, 2010.

Please amend claims 1-2, 21, and 23-24 to read as follows:

1. A computer implemented method for authorizing transactions against an account for a transaction occurring over an Internet, the computer implemented method comprising:
 associating an account holder with a set of communication devices;
 storing, in a database by a central computer, a set of identification numbers corresponding to the set of communication devices for the account holder, wherein each

communication device from the stored set of communication devices is adapted to determine and transmit a physical location of the each communication device;

determining, by at least one communication device of the set of communication devices, a physical location of the at least one communication device, wherein the physical location is based on a location of the account holder;

transmitting the physical location of the at least one communication device to the central computer;

receiving, by the central computer, a transaction request, wherein the transaction occurs on the Internet, and wherein the transaction request comprises an account number associated with the account holder and a merchant associated with the transaction;

responsive to receiving the transaction request, obtaining, by the central computer, a location of the merchant;

receiving, from the account holder, a unique character string associated with the account holder, wherein the unique character string is changeable at random by the account holder;

responsive to receiving the unique character string from the account holder, changing, by the central computer, the merchant location to the location of the account holder to form a changed merchant location;

comparing, by the central computer, the location of the at least one communication device with the changed merchant location to form an outcome; and
based on the outcome, authorizing the transaction request.

2. The computer-implemented method of claim 1, wherein comparing the location of the at least one communication device with the changed merchant location is performed by an account service provider.

21. The computer-implemented method of claim 1, wherein the transaction occurring on the Internet is for goods or services.

23. A data processing system for authorizing transactions against an account for a transaction occurring over an Internet, the data processing system comprising:

- a set of communication devices;

- a central computer, the central computer comprising:

 - a memory; and

 - a processing unit;

- a communication system linking the set of communication devices and the central computer, the data processing system adapted to:

 - associate an account holder with a set of communication devices;

 - store, in a database by the central computer, a set of identification numbers corresponding to the set of communication devices for the account holder, wherein each communication device from the stored set of communication devices is adapted to determine and transmit a physical location of the each communication device;

 - determine, by at least one communication device of the set of communication devices, a physical location of the at least one communication device, wherein the physical location is based on a location of the account holder;

 - transmit the physical location of the at least one communication device to the central computer;

 - receive, by the central computer, a transaction request, wherein the transaction occurs on the Internet, and wherein the transaction request comprises an account number associated with the account holder and a merchant associated with the transaction;

 - responsive to receiving the transaction request, obtain, by the central computer, a location of the merchant;

 - receive, from the account holder, a unique character string associated with the account holder, wherein the unique character string is changeable at random by the account holder;

responsive to receiving the unique character string from the account holder, change, by the central computer, the merchant location to the location of the account holder to form a changed merchant location;

compare, by the central computer, the location of the at least one communication device with the changed merchant location to form an outcome; and

based on the outcome, authorize the transaction request.

24. The data processing system of claim 23, wherein comparing the location of the at least one communication device with the changed merchant location is performed by an account service provider.

5. Please cancel claims 29-34.

Response to Amendment

6. The following is an examiner's statement of reasons for allowance:

The claimed invention pertains to a method and system for securely performing a transaction. For a transaction to be authorized, a portable communication device location is determined and must be co-located with a location provided by an account holder. The system first receives a location of a merchant, and the account holder is able via the Internet to change the merchant location to the location of the account holder by a unique character string.

Based on prior art search results, the prior art deemed closest to the allowed claims is Patent No. US 6,515,595 to Obradovich et al.

Obradovich et al. provides for personal communication devices where location information is used to authorize credit requests. However, Obradovich et al. fails to

teach or render obvious to one of ordinary skill in the art the feature of receiving a merchant location and changing via the Internet a merchant location to the location of an account holder using a unique character string.

Dependent claims 2-6, 21, and 24-28 are allowed for the reasons indicated above for their respective independent claims 1 and 23.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
